

Breathable Mobility Supports

BENEFITS - STOMATEX:

- By stimulating vasodilation and improving blood flow to the affected area, Stomatex® based materials provide significant advantages over traditional neoprene based elasticated supports
- High elasticity to provide exactly the right level of support
- Expels perspiration through micro chambers keeping skin drier and comfortable
- Non absorbent material
- Lightweight design and breathable soft fabric allows supports to be worn for far greater periods of time than traditional neoprene supports
- High compression resistance and tensile strength
- Fully washable, can be worn under or over clothing; man-made fibres must be used to allow the supports to breathe when worn outside of clothing

BENEFITS - BODY SUPPORTS:

- The use of orthopaedic bandages and supports in the treatment of muscle, ligament and joint strains and the management of long-term chronic conditions is widely recognised throughout sports and medicine
- Provide relief from discomfort to numerous pain conditions
- Encourages ligamentous remodelling
- Aids the correction of joint biomechanics
- Helps prevent muscle damage caused by exertion after periods of inactivity
- Balances the body's heat, keeping joints and muscles warm whilst venting excess body heat
- Simple fold over securing system allows the user to tension the 'One Size Fits All' supports to give them the precise level of support to target key points of discomfort
